

PuTTY is attempting to establish an SSH connection (port 22) to your EC2 instance at Public IP: 51.21.221.84.

The connection request is not reaching the server, causing it to time out. This means your instance is not responding to SSH requests.

Possible Reasons for the Timeout:

- Security group settings are blocking SSH (port 22).
- No public IP is assigned to the instance.
- Instance firewall (UFW/IPTables) is blocking SSH.
- VPC network settings (ACLs) are restricting inbound SSH connections
